Background

Background

Who are the Solution Architects?

The **Solution Architects Team** build integrations and **automations** between Smartsheet, her sister products like Resource Management (RM) and Brandfolder (BF), and third-party systems like Salesforce, ServiceNow, and Azure DevOps (ADO).

The **Solution Architects** are a part of Smartsheet **Professional Services** providing solutions to wide variety of Smartsheet customers across industries and organizational sizes.

Background

What is Smartsheet Control Center?

Smartsheet Control Center (SCC) is a collaborative work management system that provisions project-centric Smartsheet workspaces based on templated Smartsheet artifacts.

This ensures that the project portfolio has a consistent structure across all projects and participating organizations.

Control Center

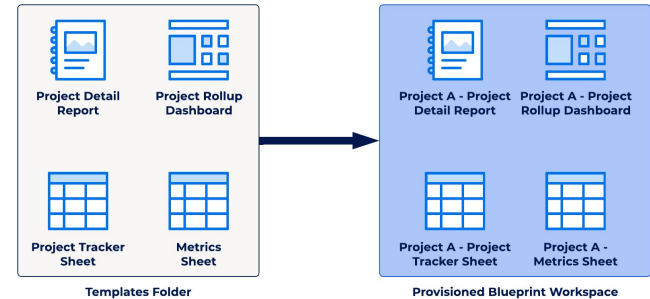

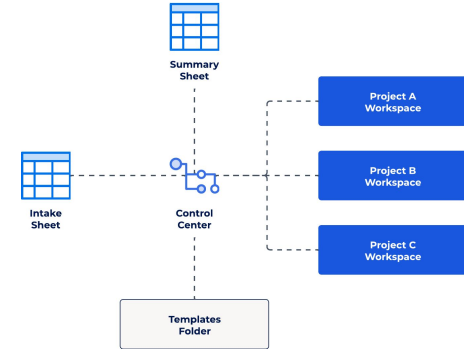

Background

How does SCC blueprint provisioning work?

At its heart, SCC copies templates into actionable project workspaces based on initial data provided in the Intake sheet (top).

When a record is added to the Intake sheet and marked as ready for provisioning, SCC will perform three essential actions (bottom):

- 1 Copy the templates folder as a new project workspace
- 2 Rename the copied templates to match the Intake data
- 3 Fill the copied templates with initial Intake data

2

Demo Environment

Demo Environment

What's in the demo environment?

This demonstration will align with a common scenario, synchronizing data between Smartsheet Control Center (SCC) and a third-party system like ServiceNow.

Simulated SCC and ServiceNow environments have been created as the demonstration starting point.

servicenow

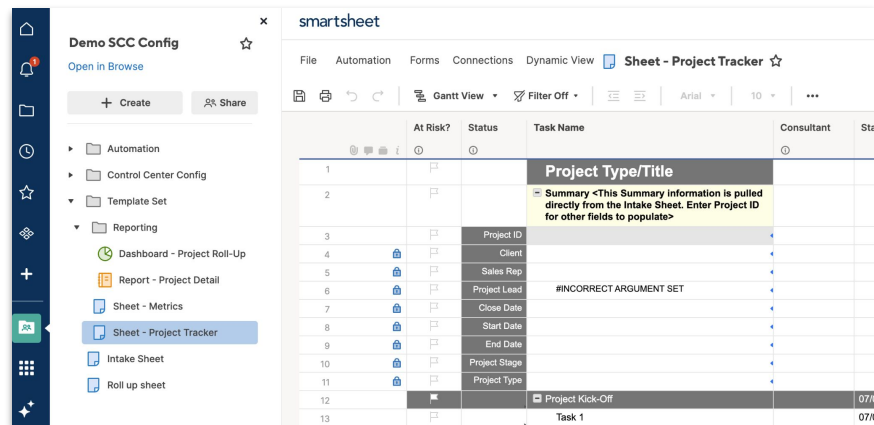

Demo Environment

How is the demo environment set up?

The Smartsheet environment has been set up to resemble a common SCC configuration. While this isn't an actual SCC instance, it provides the same structure and behavior.

Accessing the demo environment requires the creation of a Smartsheet trial account and activation of the Smartsheet public API.

Once you've created your trial account, contact us with the email address used to create the account and we will activate the Smartsheet public API access.

The screenshot displays the Smartsheet application interface. On the left, a sidebar titled 'Demo SCC Config' lists various templates under categories like Automation, Control Center Config, Template Set, and Reporting. The 'Sheet - Project Tracker' is selected. The main area shows a Gantt chart view of a project tracker sheet. The sheet has columns for 'At Risk?', 'Status', 'Task Name', 'Consultant', and 'Sta'. The 'Task Name' column contains a summary row with a warning icon and a message: 'Summary <This Summary information is pulled directly from the Intake Sheet. Enter Project ID for other fields to populate>'. Below this, there are rows for 'Project ID', 'Client', 'Sales Rep', 'Project Lead', 'Close Date', 'Start Date', 'End Date', 'Project Stage', and 'Project Type'. A 'Project Kick-Off' task is also visible, with a 'Task 1' sub-task. The 'Consultant' column shows '07/0' and the 'Sta' column shows '07/0'.

	At Risk?	Status	Task Name	Consultant	Sta
1			Project Type/Title		
2			Summary <This Summary information is pulled directly from the Intake Sheet. Enter Project ID for other fields to populate>		
3			Project ID		
4			Client		
5			Sales Rep		
6			Project Lead		
7			Close Date		
8			Start Date		
9			End Date		
10			Project Stage		
11			Project Type		
12			Project Kick-Off		07/0
13			Task 1		07/0

Demo Environment

How is the demo environment set up?

A corresponding ServiceNow instance has been created to work with the simulated SCC data.

Credentials to connect to, and interact with, the ServiceNow API will be provided.

3

Demo Use Cases

ServiceNow Project Creation

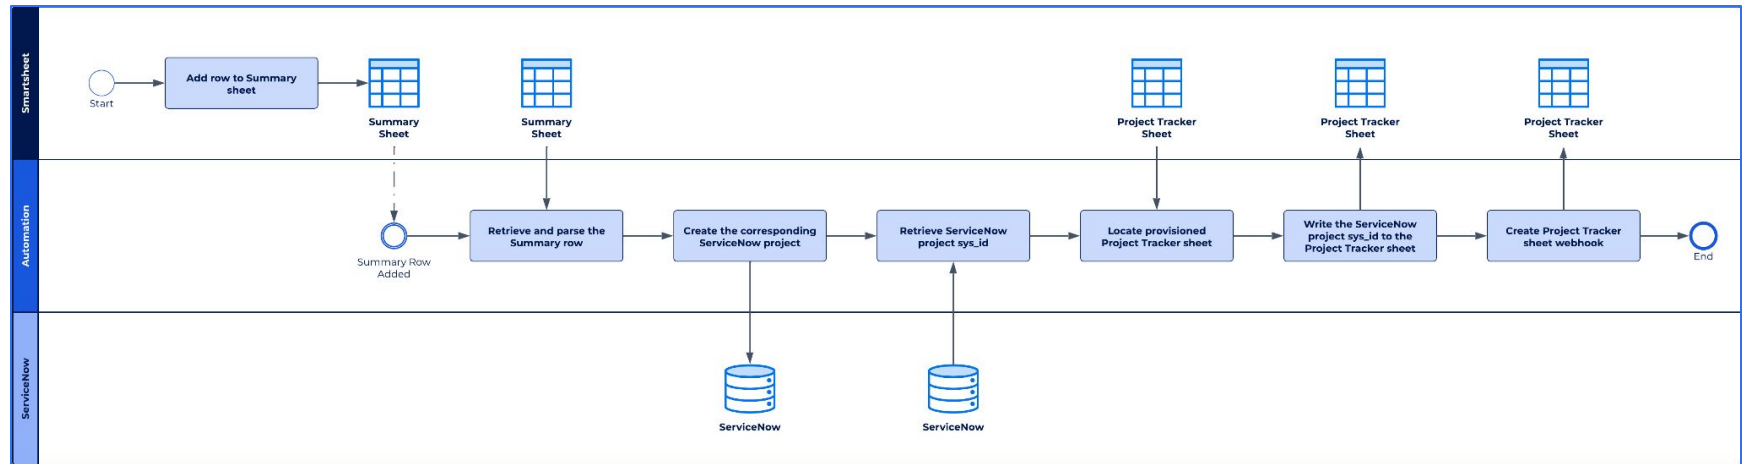

Use Case 1

Use Case

Create a ServiceNow project and set webhook relationships when a project has been provisioned in Smartsheet.

Expected Results

Confirm the ServiceNow project is successfully created.
Verify the Project Tracker webhook is successfully created.

Webhook Management

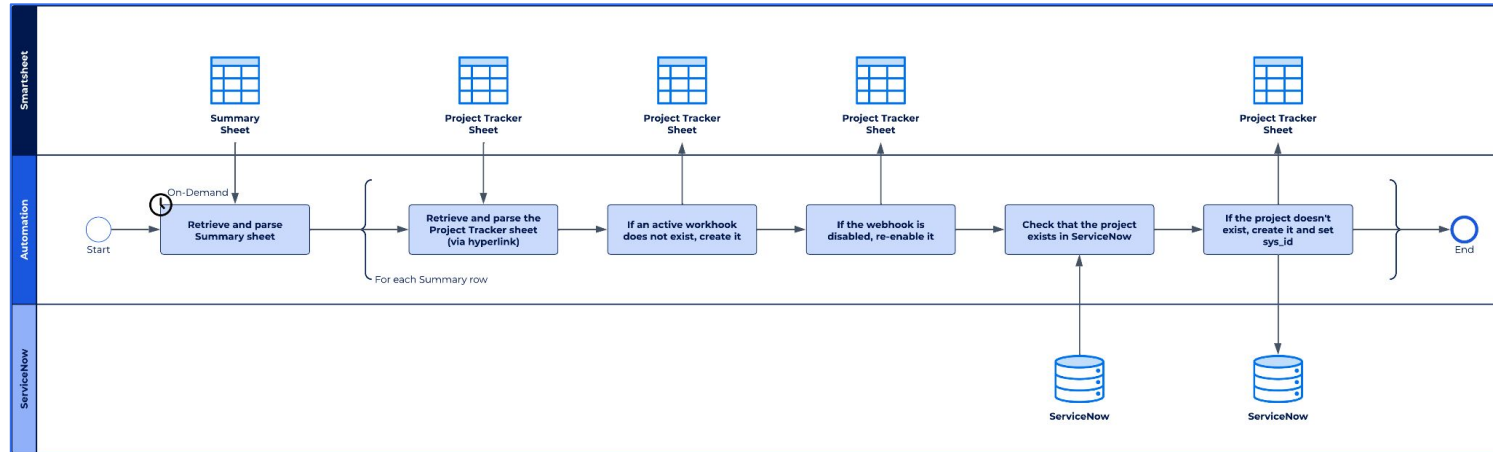

Use Case 2

Use Case

Verify that webhooks are active for each project in the Summary sheet and that corresponding ServiceNow projects exist.

Expected Results

Each Summary sheet project exists in ServiceNow.
Each Summary sheet Project Tracker has an active webhook.

Smartsheet Project Update

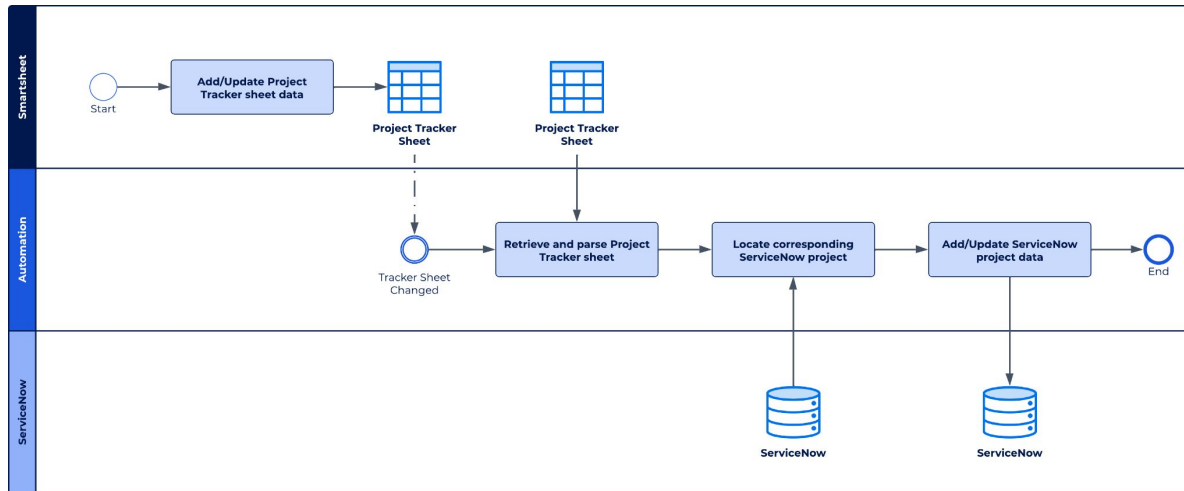

Use Case 3

Use Case

When a Project Tracker sheet is updated, add or update corresponding ServiceNow project data.

Expected Results

Confirm ServiceNow project has been updated.

ServiceNow Project Update

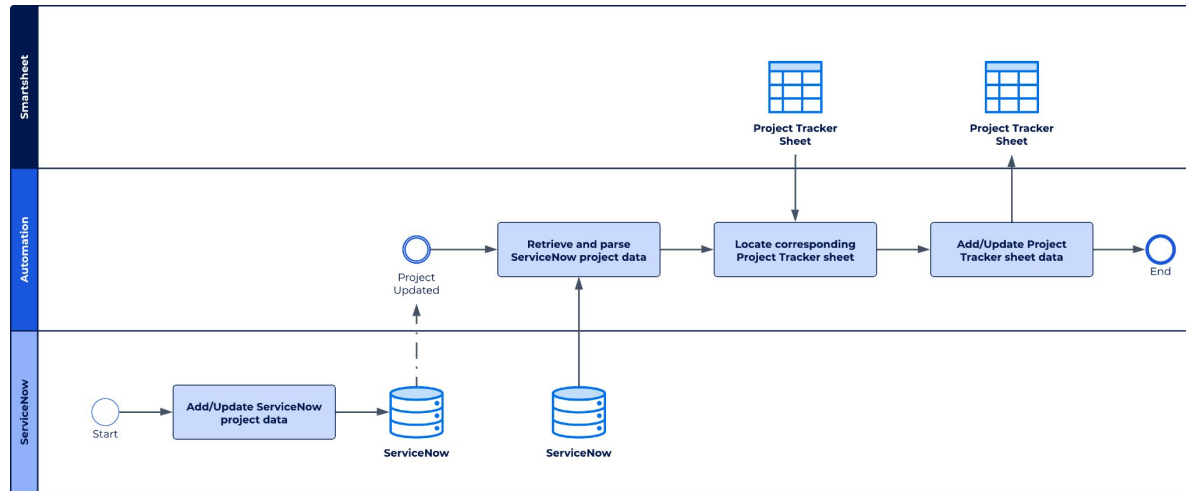

Use Case 4

Use Case

When a ServiceNow project is updated, add or update the corresponding data in the Project Tracker sheet.

Expected Results

Confirm the Project Tracker sheet has been updated.

A woman with long dark hair and glasses is sitting at a wooden desk, typing on a laptop. A man with short dark hair and glasses is sitting next to her, also working on a laptop. They are in a modern office with wooden walls and floors. There are other laptops and a small potted plant on the desk.

Thank you.
